SUMMARY

I am on a mission to contribute robust Go codebases to achieve censorship-resistant financial infrastructure.

SKILLS

- **Languages:** Go, SQL
- **Frameworks & Architecture:** Zero-Dependency Standard Library Architecture, Decentralized Financial Protocols
- **Tools & Infrastructure:** Docker, Git, Linux, macOS, Lightning Network (LNURL-pay)
- **Interests:** Bitcoin protocol development, decentralized finance, Lightning Network integration, bird watching, go-karting, and roller skating

PROJECTS

Browser-First Go Typing Game - Zone01, Kisumu

July 2026 - Present

- Developed a browser-first Go application turning progressive typing lessons into a responsive practice game using live WPM, accuracy tracking, scoring, and Docker packaging.
- Addressed the need for engaging deliberate practice by architecting a browser-facing application with cross-platform release builds and health checks.
- Delivered end-to-end product deployment from a Go backend to a responsive UX.

EXPERIENCE

Open Source Developer - YeboBank

June 2026 - Present

- Building YeboBank, an open-source Bitcoin community bank for Africa enabling cross-border payments across Kenya, Ethiopia, and Somalia.
- Integrated Lightning Network Daemon (LND) to facilitate rapid transactions converting USD/sats into regional mobile money systems (M-Pesa, Tele-Birr, and Zaad).
- Authored clean Go microservices and contributed across multiple modular codebases.

Software Engineering Apprentice - Zone01, Kisumu

April 2026 - Present

- Built backend microservices and CLI tools using Go standard library concurrency features.
- Conducted rigorous code reviews and maintained clean Git branching strategies for peer-to-peer projects.
- Containerized applications using Docker and deployed across Linux environments.

EDUCATION

University of Nairobi

Bachelor of Science in Mathematics

- Second Class Honours, Upper Division

Nairobi, Kenya

December 2021
