

STANLEY CHEGE THUITA

OPEN-SOURCE BITCOIN PROTOCOL DEVELOPER & COMMUNITY BUILDER

Location: Nairobi & Kisumu, Kenya • Email: altradits@gmail.com • Phone: +254 707 172 370 • GitHub: github.com/altradits • Portfolio: altradits-portfolio.vercel.app

MISSION & TARGET FOCUS

OPEN SOURCE GRANTS • FELLOWSHIPS • PROTOCOL DEVELOPMENT

Dedicated open-source Bitcoin and Lightning Network engineer with a strong mathematical background from the University of Nairobi. Committed to engineering sovereign financial infrastructure, cross-border Lightning routing, and community banking rails across East Africa. Co-leading the regional BitDevs Kisumu chapter to accelerate grassroots Bitcoin education and protocol research. Seeking open-source fellowship, developer grant (Brink, Btrust, OpenSats, Spiral), or protocol volunteer opportunities to contribute full-time to Bitcoin and Lightning codebases.

TECHNICAL CAPABILITIES

ZERO-DEPENDENCY ARCHITECTURE

- Bitcoin & Lightning:** Lightning Network Daemon (LND), LNURL-pay, WebLN, LND gRPC client integration, Regtest cluster automation, Payment Channel Schemas, Multi-Currency Routing, Non-Custodial Community Banking.
- Systems & Languages:** Go (Standard Library Concurrency, Goroutines, Channels, Zero-Dependency Architecture), SQL, REST APIs, Microservices, Cryptographic Ledger Design.
- DevOps & Tooling:** Docker, Linux Systems Hardening, Git (Clean Branching, Collaborative PR Review Workflows), Bash, Multi-node Regtest Networks.
- Community & Leadership:** BitDevs Chapter Leadership, Technical Socratic Seminar Facilitation, Grassroots Bitcoin Adoption, Open Source Developer Mentorship.

BITCOIN COMMUNITY PROOF OF WORK & LIVE PLATFORMS

GRASSROOTS IMPACT

- BitDevs Kisumu Chapter — Co-Founder, Partnerships & Ecosystem Lead** 2026 – Present | bitdevs-kisumu.vercel.app
 - Established and co-leading the BitDevs Kisumu chapter, driving grassroots Bitcoin education, Lightning protocol awareness, and cryptography discussions across East Africa.
 - Organize and host regular technical Socratic seminars analyzing Bitcoin Core PRs, BIP proposals, Layer-2 gossip routing, and cryptographic privacy primitives.
 - Mentoring emerging African developers to bridge local talent directly into global open-source Bitcoin fellowships and grant initiatives.
- YeboBank & Yebente — Founder & Lead Architect (Community Banking & Settlement)** June 2026 – Present | yebobank.vercel.app
 - Architected an open-source Bitcoin community banking platform (YeboBank) and settlement layer (Yebente) connecting communities across Kenya, Ethiopia, and Somalia.
 - Integrated Lightning Network Daemon (LND) to facilitate rapid, non-custodial settlements converting USD/sats into regional mobile money systems (M-Pesa, Tele-Birr, and Zaad).
 - Engineered clean Go microservices using zero-dependency standard library architecture, eliminating third-party supply-chain bloat and maximizing uptime on minimal server resources.
 - Decoupled payment routing technology from cross-border trade logistics (Buna Beta) to guarantee regulatory compliance in East African commerce corridors.
- Altradits Forge & AltSocial — Autonomous Go Systems & Peer-to-Peer Coordination** 2026 – Present | altradits.vercel.app
 - Developed autonomous Go backend microservices and peer-to-peer social coordination interfaces (AltSocial) supporting uncensorable developer communication.
 - Authored high-throughput concurrent HTTP engines using native Go routines and channels with zero external framework dependencies.

OPEN SOURCE PROTOCOL CONTRIBUTIONS

MERGED UPSTREAM

- MINMOTO (minmoto/payment-channels) — Open Source Contributor** Merged PRs
 - Contributed portable registries and payment channel schemas mapping fiat gateways for web, mobile, and Lightning Network integration.
 - Successfully merged pull requests implementing cash channels for **Western European** and **Central American** corridors, structuring multi-currency routing and fiat-to-Lightning translation layers.
- Btrust Builders & Lightning Network Daemon (LND) — Open Source Contributor** 2026 – Present
 - Active participant in open-source developer milestones, African developer registry initiatives, and Lightning Network Daemon (Lnd) integration testing frameworks (itest suites).
 - Automated local Regtest cluster deployments to simulate channel lifecycle, HTLC routing, and fee estimations under adversarial network conditions.

ENGINEERING APPRENTICESHIP

EDUCATION & MATHEMATICS

- Zone01, Kisumu** Apr 2026 – Present
 - Software Engineering Apprenticeship**
 - Built backend microservices and developer tools using Go standard library concurrency features.
 - Maintained clean Git branching strategies and conducted rigorous peer reviews for peer-to-peer projects.
 - Containerized applications using Docker across Linux production environments.
- University of Nairobi** Dec 2021
 - Bachelor of Science in Mathematics**
 - Second Class Honours, Upper Division.**
 - Rigorous mathematical training in linear algebra, number theory, probability, and discrete structures.
 - Provides deep mathematical foundation for cryptography, elliptic curves, and deterministic ledger accounting.
