

STANLEY CHEGE THUITA

OPEN-SOURCE BITCOIN PROTOCOL DEVELOPER & COMMUNITY BUILDER

Location: Nairobi & Kisumu, Kenya • Email: altradits@gmail.com • Phone: +254 707 172 370 • GitHub: github.com/altradits • Portfolio: altradits-portfolio.vercel.app

MISSION & TARGET FOCUS

OPEN SOURCE GRANTS • FELLOWSHIPS • PROTOCOL DEVELOPMENT

Dedicated open-source Bitcoin and Lightning Network developer with formal mathematical training from the University of Nairobi. Engineering sovereign financial infrastructure, zero-dependency Go microservices, and grassroots community banking rails across East Africa. Co-founder and ecosystem lead of BitDevs Kisumu, educating emerging African software engineers on Bitcoin Core and Lightning protocol mechanics. Actively seeking open-source developer grants (Brink, Btrust, OpenSats, Spiral), research fellowships, or protocol volunteer roles to contribute full-time to Bitcoin codebases.

TECHNICAL CAPABILITIES

ATS-OPTIMIZED CATEGORIZATION

- **Bitcoin & Lightning Infrastructure:** Lightning Network Daemon (LND), LND RouterServer gRPC, SendPaymentV2, LNURL-pay, WebLN, BOLT-11 / BOLT-12 invoices, Regtest cluster automation, payment channel state machines, Cashu / Fedimint architectures.
- **Languages & Systems Engineering:** Go (Goroutines, Channels, Zero-Dependency Standard Library Concurrency), SQL (PostgreSQL), Bash scripting, JavaScript (ES6+), Cryptographic Ledger Architecture.
- **DevOps, Security & Tooling:** Docker containerization, Linux systems hardening, Git (rebasing, collaborative PR reviews), CI/CD pipelines, multi-node network simulations.
- **Community & Protocol Leadership:** BitDevs Socratic seminar facilitation, open-source developer mentorship, technical protocol documentation, grassroots circular economy advocacy.

OPEN SOURCE PROTOCOL CONTRIBUTIONS

DIRECT UPSTREAM IMPACT

MINMOTO (minmoto/payment-channels) — Open Source Contributor

Merged PRs | June 2026 – Present

- **Authored** and merged pull requests implementing portable cash channel schemas and multi-currency routing matrices for Western European and Central American market corridors.
- **Engineered** fiat gateway registry schemas mapping local currency endpoints to Lightning payment routes, enabling automated fiat-to-sats translation layers.

Btrust Builders & Lightning Network Daemon (LND) — Open Source Contributor

June 2026 – Present

- **Contributed** to African developer registry initiatives, open-source protocol milestones, and Lightning Network Daemon (Lnd) integration testing frameworks (itest suites).
- **Automated** multi-node Regtest cluster suites simulating HTLC routing and channel state transitions across 25+ adversarial network latency and disconnect scenarios.
- **Audited** LND gRPC endpoints (SendPaymentV2, TrackPaymentV2, hold invoice interceptors) to verify payment settlement atomicity under high routing load.

BITCOIN COMMUNITY PROOF OF WORK & LIVE PLATFORMS

GRASSROOTS SCALE

BitDevs Kisumu Chapter — Co-Founder, Partnerships & Ecosystem Lead

April 2026 – Present | bitdevs-kisumu.vercel.app

- **Organized** and facilitated 8+ technical Socratic seminars averaging 25+ engineers per session on Bitcoin Core PRs, BIP proposals, and Layer-2 gossip routing.
- **Mentored** 6 African software engineers into open-source Bitcoin contributions and fellowship cohorts, establishing direct talent bridges to global grant committees.
- **Curated** 30+ technical deep-dive agendas analyzing Schnorr/Taproot (BIP-340/341), BIP-21 unified URI schemes, and payment channel liquidity management.

YeboBank & Yebente — Founder & Lead Architect (Community Banking & Settlement)

June 2026 – Present | yebobank.vercel.app

- **Architected** an open-source Bitcoin community bank (YeboBank) and settlement layer (Yebente) connecting regional communities across Kenya, Ethiopia, and Somalia.
- **Engineered** zero-dependency Go microservices achieving <15ms p99 latency and <20MB base resident memory footprint under concurrent load with 99.9% uptime.
- **Integrated** LND gRPC client facilitating rapid USD/sats settlements into regional mobile money systems (M-Pesa, Tele-Birr, Zaad), serving unbanked populations.
- **Decoupled** payment routing technology from cross-border trade logistics (Buna Beta) to guarantee regulatory compliance across East African trade corridors.

Altradits Forge & AltSocial — Autonomous Go Systems & Peer-to-Peer Coordination

April 2026 – Present | altradits.vercel.app

- **Developed** autonomous Go backend microservices and peer-to-peer social coordination interfaces (AltSocial) supporting uncensorable developer communication.
- **Authored** concurrent HTTP engines utilizing native Go standard library goroutines and channels with zero third-party framework dependencies.

ENGINEERING APPRENTICESHIP

EDUCATION & MATHEMATICS

Zone01, Kisumu

April 2026 – Present

Software Engineering Apprentice

- **Built** backend microservices and CLI developer tools using Go standard library concurrency features.
- **Maintained** disciplined Git branching strategies and conducted rigorous peer reviews across 40+ engineering projects.
- **Containerized** distributed applications using Docker across Linux production server environments.

University of Nairobi

December 2021

B.Sc. in Mathematics (Second Class Upper)

- **Number Theory & Cryptography:** Applied elliptic curves over finite fields (secp256k1) and modular arithmetic to Schnorr/Taproot signatures (BIP-340).
- **Graph Theory & Algorithms:** Applied Dijkstra and probabilistic pathfinding algorithms to Lightning Network payment channel routing and liquidity graphs.
